

# Bespoke Development Services

Dayta Designs Ltd, part of the Sage Circle of Excellence, is able to offer bespoke development to the Sage 200 suite. This means we can take the standard Sage software and modify it to your specific requirements.

Out of the box, Sage 200 will usually fulfil most of your needs. For requirements that lie outside the standard scope, our development team is able to code additions or modifications that give you a total solution.

We take the time to fully understand your requirements and business processes so that together we can develop the right solution.

## Examples of Bespoke work

Recently, a Company who was using Sage Line 100 and a bespoke, non-integrated, Quoting and Purchasing system, approached us. They wanted to upgrade to Sage 200 but still maintain the functionality of their bespoke system.

The Sage Line 100 was upgraded to Sage 200 and a Bespoke System was written using VB.net. An additional menu bar was created in the Sage 200, which provided access to all the programs and menu options within the

Bespoke System. We used Sage Development Objects which meant that our programs had the same look-and-feel as the standard Sage modules.

A beta release was made available, and we went through all the programs with the customer, to make sure the specification had been correctly interpreted. The suite was then developed on to completion.

***“Dayta Designs Ltd. spent time understanding the detail of what we required, produced a prototype engaged in joint consultation and delivered a fully integrated solution for our business.”***

**Steve Bridges, Area Sales Manager,  
Tomita UK Ltd.**

As a comparison, a very simple modification that was requested by a customer was to add an additional field on the Stock Record card. We made a field available and modified a number of screens to display the field, which was then labelled as the customer wanted. Job done!
